Using world class technologies in design, materials and processes, Spectrum have invested in the future for all of us.

No longer satisfied with outdated 2-pac paint technologies currently in use, Spectrum commissioned international consultants to design bespoke paints and utilise latest

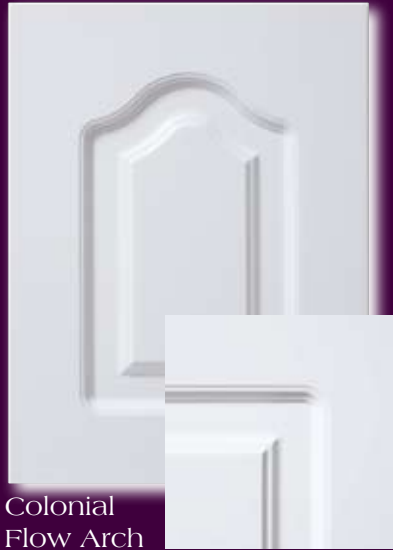

manufacturing technologies to provide an environmentally friendly solution to the process of manufacturing painted doors and panels.

The result, a streamlined process, minimising waste, maximising productivity, minimising harmful emissions, safeguarding our future.

Our state of the art production facility based in Perth, Western Australia, boasts CNC machinery to turn your design into your reality.

Spectrum Doors & Panels. Setting the

beautiful

Cutting machines produce the doors, automatically calculating the optimum cutting cycle to minimise waste, before sending them down the paint line to be sprayed by robots maintaining a uniform paint film thickness, producing a consistently perfect finish every time using Eco-friendly coatings.

The custom finish has been fully tested to ensure it meets our strict hardness, chemical resistance and longevity criteria. In this way, we can not only meet the standards required, but exceed in all areas, producing a lasting product to be proud of.
